Peripheral Electronics

Installation Notes

GMAA³	Enables aftermarket amplifier installation in 2002-2005 vehicles with fixed line level, data controlled GM premium audio systems (Premium BOSE®). Provides a data-bus generated remote amplifier turn-on output. User selectable fading options; set as front, rear or non-fading. If not equipped with "Premium BOSE®" then SVEN2 or Vendetta II can be used.
GMAH24B¹	These vehicles have a "Premium Bose®" amp that only accepts 2 channel audio inputs. OnStar® volume can be controlled via the steering wheel audio controls. The GMAHCM chime module is not required when using the BOSE® amplifier. If you are not using the BOSE® amplifier, then the GMAH24 and GMAHCM interfaces are required. The aftermarket radio will not fade, however it will still continue to balance.
GMAHCM⁶	2004 model year vehicles with BOSE® require the addition of the GMAHCM .
GMAH32	Works with or without Bose® amplified systems. Aftermarket radio controls can control OnStar® audio if used in conjunction with a compatible SWI series steering wheel interface. RAP functions lasts for 10 minutes or until a door is opened.
GMCO**	Is compatible with GM's "Standard BOSE®" if OnStar® retention is not required or "Premium BOSE®" if the new system does not utilize the OE amplifiers and OnStar® retention is not required.
GMAHLANB	Does not retain factory XM receiver. Factory XM receivers are only compatible with factory stereos. May use this interface even if the vehicle does not have OnStar® but need to interface the Bose® amplifier.
GMOS21B	Factory radio being replaced can not have RDS (Radio Data System). If the factory radio indicates RDS the GMOS21B is not compatible. Does not retain factory XM receiver.
GMAHSC	Does not retain the factory XM receiver; you will lose this option when the factory radio is replaced with an aftermarket radio. You may use this interface even if the vehicle does not have OnStar® but need to the interface to operate the factory amplifier. OnStar® must be enabled using the OnStar® button on the rear view mirror, steering wheel OnStar® button will not enable OnStar® OnStar® volume is not adjustable on CTS-V and SRX models, volume is preset at medium level. Not compatible when replacing SRX Factory Navigation Radios.
GMOS1	The GMOS1 will interface with all GM radios that use the 21 pin / 9 pin connectors. If there is a "RDS logo on the radio face or the radio uses the 24 pin / 12 pin connectors, this interface will not work.
GMAHLAN	Provides R.A.P., Illumination, V.S.S., Parking break, and Reverse outputs. Can be used in combination with any GMLAN interface.
GMCOL11	Does not retain OnStar. For OnStar retention use the GMAHLAN11. Compatible with both amplified and non-amplified systems. Does not retain factory XM.
GMCOL29	Does not retain OnStar. For OnStar retention use the GMAHLAN or GMAHLANB. Compatible with both amplified and non-amplified systems. Does not retain factory XM.
GMAHLANL11	Does not retain factory XM receiver. Factory XM receivers are only compatible with factory stereos. May use this interface even if the vehicle does not have OnStar® but need to retain factory chimes and RAP function.
GMAHLAN2L11	Does not retain factory XM receiver. Factory XM receivers are only compatible with factory stereos. May use this interface even if the vehicle does not have OnStar® but need to retain factory chimes and RAP function.
GMLNAV	Provides VSS, R.A.P., and Illumination, Reverse, and Parking Break triggers. Can be used in conjunction with any GMLAN interface.
GMLRSE	Provides audio feed from RSE. Can also feed audio/video signal from aftermarket radio.
GMLRRC	Compatible with non-amplified and four channel Bose® factory amplified systems. Not compatible with six or eight channel Bose® factory amplified systems. The six and eight channel Bose® audio systems can be determined by looking as the service parts sticker normally located in the glove compartment, if the codes Y91 or Z75 are present the vehicle is not compatible with the GMLRRC. Does not retain steering wheel controls. Does not provide illumination.
Hummer H3	Detailed instructions of the modification are available on the Tech Brief section of PeripheralElectronics.com or visit this direct link: http://www.peripheralelectronics.com/tech_briefs/GMAH2424B_GMCO_Hummer_H3_Harness_Mod.pdf

Note Legend

AFTERMARKET	Aftermarket amplification is being installed and the factory amplifier is not being used.
BOSE®	Factory equipped BOSE® amplifier and speakers
NA	Not Applicable
NR*	Nothing Required (use standard wire harness)
STANDARD	Basic audio system, i.e.. no factory amplifier, BOSE® , OnStar®
PREMIUM	Factory upgraded audio system. vehicle has factory amplifier
PREMIUM BOSE®	Found in select GM vehicles. This system has fixed level audio signals and volume, fade and tone is controlled by data direct to the OE amp.

How to test for PREMIUM BOSE®:

BOSE® is a registered trademark of BOSE corp. OnStar® is a registered trademark of OnStar corp.
